DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of claims 16 and 17 in Paper No. 9 is acknowledged. The traversal is on the ground(s) that the inventions are not independent or distinct. This is not found persuasive because it is possible to vary the values of x and y during fabrication in the two layers such that one can be p-type and the other n-type but with the same band gap due to the native defect structure and not extrinsic doping.

2. The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 16 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In particular, steps 4 and 5 of claim 16 do not indicate the range for the variables x and y for the layer formed in step 4 and the layer formed in step 5. The examiner assumed the range for x and y was the same as for the layer formed in step 3.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Application/Control Number: 09/783,035

Art Unit: 2813

- 6. Claims 16 and 17 are rejected under 35 U.S.C. 102(a) as being anticipated by Nakamura et al. (JP 06-209120). Nakamura describe forming a substrate, forming a buffer layer, forming an n-layer of AlGaInN, forming a p-layer of AlGaInN, and forming a doped middle layer of p-type AlGaInN (abstract). The dopant is described as being Zn (column 1, line 7).
- 7. Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Keith A. Christianson whose telephone number is (703) 305-4029. The examiner can be reached by electronic mail at keith.christianson@uspto.gov. The examiner can normally be reached on M-F 8:00-4:30 ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Olik Chaudhuri can be reached on (703) 306-2794. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7722 for After Final communications.

Application/Control Number: 09/783,035

Art Unit: 2813

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 306-3431.
